

Jan SKOPEČEK *Deputy Speaker, Chamber of Deputies,
Parliament of the Czech Republic*
*Chairman's note: LONG-TERM STRATEGY IS MORE IMPORTANT
THAN QUICK GAIN*

- ⇒ Current situation – multiple increase of energy prices seriously influences development of national economics; the price of energy is passed on to all sectors of the economy
- ⇒ At the same time, some players involved in supply chains are making extreme profits
- ⇒ Open market has no protective measures to face that, state regulation or consumers' subsidy is not a good solution
- ⇒ Under such circumstances, the security and self-sufficiency in energy supply become a matter of extreme importance
- ⇒ Only nuclear power development is a solution for the Czech Republic taking into account the both requirements – zero-emission electricity generation by 2050 and well balanced energy mix
- ⇒ Robust and long term energy strategy is vital for the sustainable development of our economy
